

1. Write a C++ program that displays your name and address.
2. Write a program that asks the user to enter an hour value and a minute value. And displays the two values in the format shown in the following sample run:
 Input -> Enter the number of hours: 9
 Input -> Enter the number of minutes: 28
 Output -> Time: 9:28
3. Write a C++ program that asks for a distance in KM and converts it to Meter and CM.
4. Write a program that asks the user to enter his or her age. The program then should display the age in months:
 Input -> Enter your age: 29
 Output -> Your age in months is 348.
